2. LABORATORY CREATION, TRAINING PROGRAMMES & INTERNATIONAL COLLABORATIONS

NANOTECHNOLOGY LAB LTFN ESTABLISHMENT

The **Laboratory for Thin Films - Nanobiomaterials - Nanosystems & Nanometrology (LTFN)** is established at the Physics Department of Aristotle University of Thessaloniki (AUTh). It has an experience of 25 years in Thin Films Technology, Fabrication of nanostructured materials & nanoparticles, developing/deploying in-situ & real-time monitoring techniques, modeling and Nanometrology. LTFN programs strive to interact with Academia, Research Institutes and Organizations and Industry and to transfer its technology to scientific and industrial users and developers and provide excellently educated graduates and research associates to society.

First, the LTFN was acknowledged as a pioneering center in Thin Films Technology, Nanomaterials, Nanometrology and Optical Technology, by creating state-of-art research facilities in the frame of European and National Projects (e.g. STRIDE, COTECH, ISOTECH, YPER, CERFIL, PABET), with some of them were awarded from EU as “Outstanding”.

After 2000, LTFN activities were extended in the emerging sector of Organic Electronics, by the development of Nanomaterials and Technology for Organic Electronic devices (organic semiconductors, transparent electrodes, gas barrier materials) for applications such as Organic Photovoltaics, Organic Transistors, Organic Light Emitting Diodes, Biosensors, e.t.c. Within its strategic collaborations with European groups, LTFN upgraded the facilities with the development of three pilot lines in the frames of the R&D Projects FP7 REGPOT ROleMak (<http://www.rolemak.eu>), FP7 NMP Smartonics (<http://www.smartonics.eu>), FP7 NMP Gladiator (<http://graphene-gladiator.eu>), και GR-Light (www.gr-light.gr).

After 2005, in LTFN initiated a new research field, the Nanomedicine by the design, synthesis, characterization , in-vitro & in-vivo evaluation of the efficacy for nanoparticles for diagnostic and therapy, scaffolds for cell regeneration, nanoporous materials and multifunctional nanosystems for drug delivery and their application in broad range implants (like cardiovascular stents, orthopaedics, ophthalmology, e.t.c.). The coordination of national research projects (like “Nanocardio” and “NanoArthrochondros”) steered the acquisition of proper equipment, close collaboration with hospitals, universities from abroad and companies as well as to the special training of the personnel from several specialties (clinical doctors, cardiologists, orthopedics, oculist, pathologists, physicists, biochemists, bioengineers e.t.c). The final result of the research activities of the lab in the fields of Nanomedicine and Nanobiotechnology is the international establishment of LTFN as a center of excellence in research and training

The lab LTFN has an area ~ 1900 m² in the Physics Department of AUTh and lately in the new buildings outside university campus, that created in the period 1990-2014 from competitive research programs exclusively. The cost of the installed equipment in this area the last 20 years is over 15.000.000 €. All these labs are consisted the LTFN lab (<http://www.ltfn.gr/>).
